

## CCT3687 BARIATRIC CONCEALED CADAVER

### FEATURES

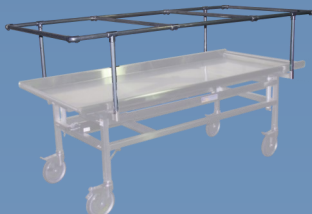

Large 8" Casters

Hydraulic Hand Crank Lifting  
Mechanism

Lightweight Aluminum Frame

The task of handling deceased patients is a common problem for the staff in any hospital. Not only is it physically demanding to transport a cadaver, but doing so in plain sight can be disturbing for other patients, visitors, and staff members. The **CSI/JEWETT** CCT3687 Concealed Body Transport Cart provides a simple solution for any medical facility. The CCT3687 Bariatric Concealed Cadaver Transport Cart is a heavy duty version of the earlier CCT101 cart. With a 1000# capacity the CCT3687 will handle all your transport needs.

Equipped with large swivel casters, this lightweight cart can be pushed to the bedside with minimal effort. The staff member then simply uses the hydraulic lifting mechanism's hand crank to adjust the cart to the height of the bed, and transfers the deceased to the CCT3687's morgue tray. After lowering the tray to normal height and covering the unit with the lightweight false top and vinyl cover sheet, the cadaver is ready for transport. As the staff transports the body to the morgue, the cart appears to be empty. In addition to shielding those passing by from the unpleasant sight of a cadaver, the CCT3687 makes the physical act of transport easier on the staff thanks to its oversized casters. Easy access rear mounted lift mechanism folds away during transport.

The cart uses the **CSI/JEWETT** MT1 body trays which makes it compatible with most **CSI/JEWETT** and **JEWETT** morgues.
